

What You Need to Know Insurance Process

QUALITY ROOF INSPECTION

The first step is a Quality Roofing System Inspection. Here, we will closely inspect the home and the roofing system, including all of its components for damages. Damages will be documented, photographed, and shared with you, so that you can make a better, more informed decision, about your home's repairs.

01

FILING YOUR CLAIM

If the Roofing system has qualifying damages, such as hail impacts, or wind damages - your Insurance Provider will need to be contacted and a Claim will need to be created. Remember, Insurance carriers are prohibited by law, from raising your rates due to filing a claim, caused by an "Act of God".

02

ADJUSTER'S MEETING

An Insurance Adjuster will inspect your property for the reported damages. Not all Insurance Adjusters are qualified construction experts so it is very important to have a Knowledgeable, Reputable, and Professional Roofing Contractor present during this inspection, as 70% of all claims are greatly underpaid by Insurance Carriers at the initial approval of the claim.

03

REBUILDING YOUR HOME

After deciding on material type and color, the restoration of your property will begin. After removing the existing damaged materials, your property will be inspected again for any unseen or hidden damages that may need to be addressed with the Insurance Carrier. If no such issues arise, your property will be restored to a Pre- Loss Condition by our expert construction professionals. This process typically takes about a day or two for average sized homes.

04

FINAL INSPECTION

After our team has completed your roof replacement, our Project Managers will do a thorough inspection of your property to ensure a top quality installation was achieved. Finally, we will send our letter of completion to the Carrier, and wait for the final payment to arrive.
